

CYLINDER MORTICE ESCAPE LOCKS

Upright cylinder mortice twin bolt escape deadlatch. Heavy zinc plated steel lock case, prepared for Scandinavian style bolt through cylinders, and Scandinavian diagonal bolt through furniture with 8mm "split" spindle. Radiused forend and strike plate for easy machine morticing, available in either satin chrome or brass plated finish. May be used with double cylinder, or single cylinder and thumb turn combinations.

FUNCTION:

Lower latchbolt operated by lever furniture from either side, at all times, additional may be withdrawn by use of the external key.

Upper deadlatch automatically locks as door closes, can be withdrawn by use of key outside or lever furniture inside.

The upper deadlatch bolt may be retained within the lock case by depressing the bolt into the case and rotating the inner key, a reverse turn of the inner key releases the deadlatch bolt. (The inner cylinder can be keyed differently from the outer cylinder to offer

management control of the hold back facility)
The inner lever furniture offers escape at all times.
